User Stories:

As a Registered User

I can update the gallery images of a trip

So that each trip will have its precise images based on each location

Acceptance Criteria

1. Users can add multiple web links as images for a trip.
2. Users can edit or remove existing links.
3. All links must be validated as valid URLs before saving.
4. Saved links should immediately reflect in the gallery display.
5. The gallery should display images fetched from the provided links.

Scenario

1. User logs in and navigates to "Trips."
2. User selects a trip to view details.
3. In the "Gallery" section, the user sees existing images as links or placeholders.
4. User clicks "Add New Link" and provides a web link to an image.
5. User clicks "Save Changes," and the new image link is stored in the system

As a Registered User

I can add trip and enter all of the details of a particular location

So that each trip information will be visible to others

Acceptance Criteria

1. Users should be logged in.
2. Users can enter the details of a country such as hotels, landmarks etc.
3. Users can insert some gallery attachments (Web Links) upon creation.
4. All input must be validated by the system such as no input for required fields.
5. Saving the changes will direct to the trip that has been added.

Scenario

1. User login and navigate to "Trips".
2. User selects the button "Add Trip".
3. User is redirected to the Add trip forms.
4. User fills in the required details.
 - a. Country
 - b. Hotel
 - c. Landmark
 - d. Description
5. User selects the button "Save Changes".
6. The system show a notification says "Adding trip successful"
7. The system will redirect to the new added trip page

As a Non-registered User

I can create an account

So that I will have the same privilege of access to post any trip

Acceptance Criteria

1. Users should be able to access the "Sign-up" page from the navigation menu or prompts within the application.
2. Users must provide valid information for all required fields (name, email, and password).
3. The password field must include a confirmation entry, ensuring both match.
4. The email must be unique and validated for proper format.
5. Upon successful registration, the user is automatically logged in and redirected to the home page.
6. If registration fails (e.g., due to existing email or missing fields), the system displays an appropriate error message.

Scenario

1. A non-registered user clicks "Sign-up."
2. The user fills in the required fields (name, email, password, confirm password) and accepts terms and conditions.
3. The user submits the form.
4. If valid, the account is created, and the user is logged in automatically.
5. If invalid, the system shows error messages for corrections.

NOTE: We intendedly to create 3 user stories only that will be most significant to the system, and also for the sake of creating its acceptance criteria and Main Scenario.
